

KINDLING EASY

Bioresonance

The efficient way of bioresonance

- „True“ 2-channel technique for simultaneous **endogenous and exogenous** bioresonance
- **Autonomous adjustment of parameters** based on automatic cyclic measurement during treatment
- Individual bioresonance with **automatic cyclic measurement**
- Greater acceptance through **displaying results**
- Time efficient and **delegable**

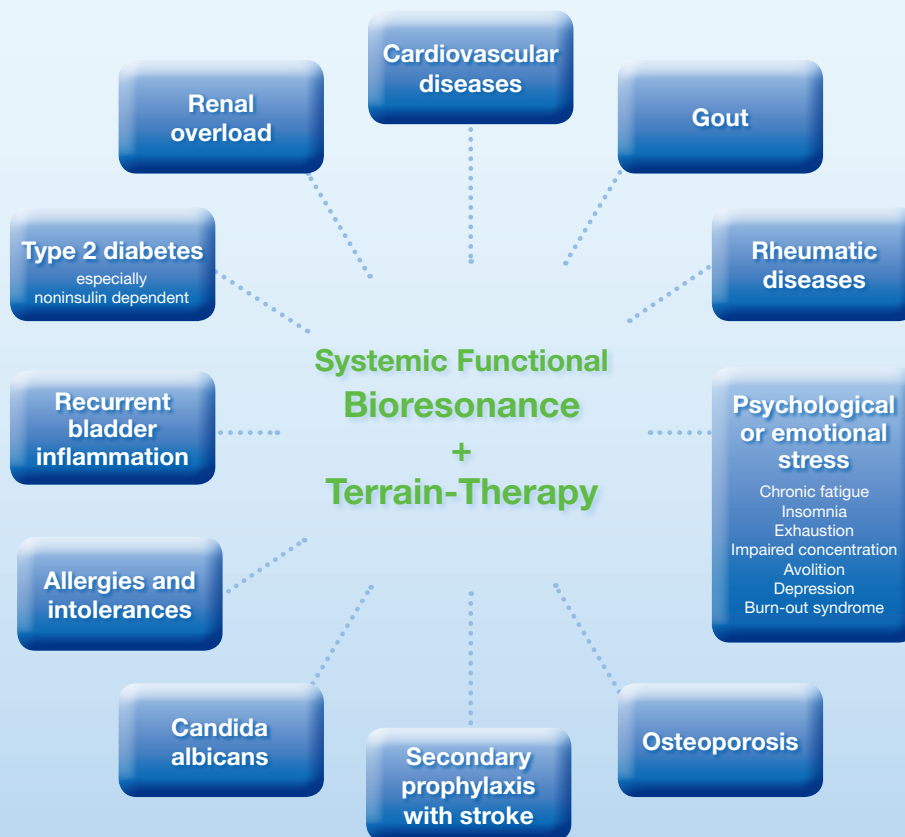

Systemic Functional Bioresonance (SFB)

KINDLING-EASY is a self-adjusting therapeutic device for daily use with systemic functional bioresonance.

The systemic functional bioresonance approach is based on the fact that, besides the organically identifiable diseases, an increasingly large proportion of clients complain of disorders that do not correspond to any pattern recognised by the diagnostic tests used in conventional medicine, and therefore require additional diagnostic and therapeutic techniques from complementary medicine.

Kindling EASY adjusts itself automatically every 2 minutes, based on measurements of skin conductance. This means that the client receives recently checked and individualised bioresonance treatment, which conforms very closely to the regulatory requirements of the body and therefore guarantees the selection of "operator-independent" error-free treatment parameters.

Applications

Contact

Technical Support / Sales

Eduard Abrams
 Kindling GmbH Medizintechnik
 Gropiusstr. 9
 31137 Hildesheim, Germany

Phone: +49 (0)5121-511997
 Fax.: +49 (0)5121-511927
